

# VIRTUAL GATE GUARD

*"We had problems with security guards going to sleep or waving people through without checking them... One of the biggest advantages we have found with Envera is the record keeping. We didn't have that kind of record keeping with security guards. I don't think we would ever go back to traditional guards.*

**- An Envera Protected Community since 2007**

## Take Control of Entry Gates and Decrease Expenses with Envera

Envera is a security company that replaces or improves residential gate guards with the patented Envera Kiosk System™, which offers enhancements to security while decreasing guard costs.

The Envera Kiosk System™ uses the latest technology, including high-resolution digital video cameras and recorders with secure Internet connections to offer high quality access control to visitors. The system captures every visitor's face and license plate

Envera's technology stores audio and video for every visitor entering a community!

Does your guard remember every visitor that came through your community's gate this month? Probably not.

Envera's state-of-the-art Central Station communicates with visitors at community entrance gates using two-way audio and one-way video. Licensed Guards remotely greet guests, contact residents and grant or deny access as necessary. Each visitor is logged using active video and audio verifications before being allowed or denied entry into a community. Envera's remote Virtual Guards only open the gate if a visitor is authorized.

## Gate Monitoring Features & Benefits
